## **RE: RECOMMENDATION LETTER – MARSTRACK ERP FOR INVENTORY AND WORKSHOP**

### **TO WHOMSOEVER IT MAY CONCERN**

Ben Air is an Aircraft maintenance company based at Moi International Airport. The business maintains Airplanes and as such tracking costs of parts and the movement was a big challenge for our business.

Spare Parts ordering, Tracking pending orders and Inventory price comparison between suppliers was essential so that we may get to deal with the best suppliers and be able to track what spare were fitted and from which suppliers were they bought after a period of time.

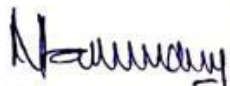

Safety has always been our priority and as such we also needed to keep track of what engineers worked on the Aircraft. Hence we also needed to keep track of preventive maintenance tasks and when they were last accomplished.

We went through the workshop and the Inventory Module of GBS Africa. And we saw the power it had in giving us all what we needed. However GBS Africa also managed to customize some of the features we wanted for our business.

Their support has been extremely well since we went live on the system.

We also look forward to integrating the operations of the sister companies as we continue to work with Genius Business Systems.

We recommend Genius Business System to any company which needs Automation and maintaining their records in a centralized database Management System.
